Live tournament broadcasting
of games via the internet

Product highlights

Serial tournament e-Boards are used for live broadcasting of games at chess tournaments around the world including top level tournaments and world championships.

The serial tournament boards can be connected in large numbers using conventional cables or the very convenient wireless DGT Caïssa System. The boards are available in Walnut (pictured), Rosewood or Wengé and are compatible with all electronic DGT chess pieces. Use the free DGT LiveChess software to manage the boards and publish games live on your website.

The board's sensor technology fast and accurately recognizes all individual pieces by colour and type. The DGT 3000 chess clock connects to the board. Serial boards are standard supplied in a strong canvas bag.
