

DGT Caïssa System

WIRELESS CONNECTIONS FOR QUICK AND EASY TOURNAMENT SET-UP

Wireless

Compatible with all existing serial e-Boards

Product highlights

The DGT Caïssa System is a wireless way to connect serial tournament e-Boards to the computer without having to lay cables between boards and to the computer. It is compatible with all existing serial e-Boards. Board Module: one for each board; it connects to the board and DGT 3000 clock (underneath which it is placed) and sends information to the computer.

- Collector Module: one per 100 boards; it connects to the computer and receives the information from the Board Modules.
- Booster Module: depending on the tournament venue one or more Booster Modules may be required to booster the signals.

The Caïssa System is supplied in a custom made aluminium case that holds all materials to connect ten e-Boards. Use the free DGT LiveChess software to show the games live via the internet.
